From chaotic to controlled

Using all-in-one cloud-native platform

Michailidou Sofia, Technology Consultant

Infocom Security Conference 2023

Complexity of the current status quo

- Security around resources is fragmented: cloud vs on-prem
- Access for users is fragmented: local users vs remote users
- Sensitive data visibility is fragmented: separate visibility and patterns for cloud vs on-prem resources
- Threat visibility is piecemeal and inconsistent

Forcepoint

Cloud Transformation

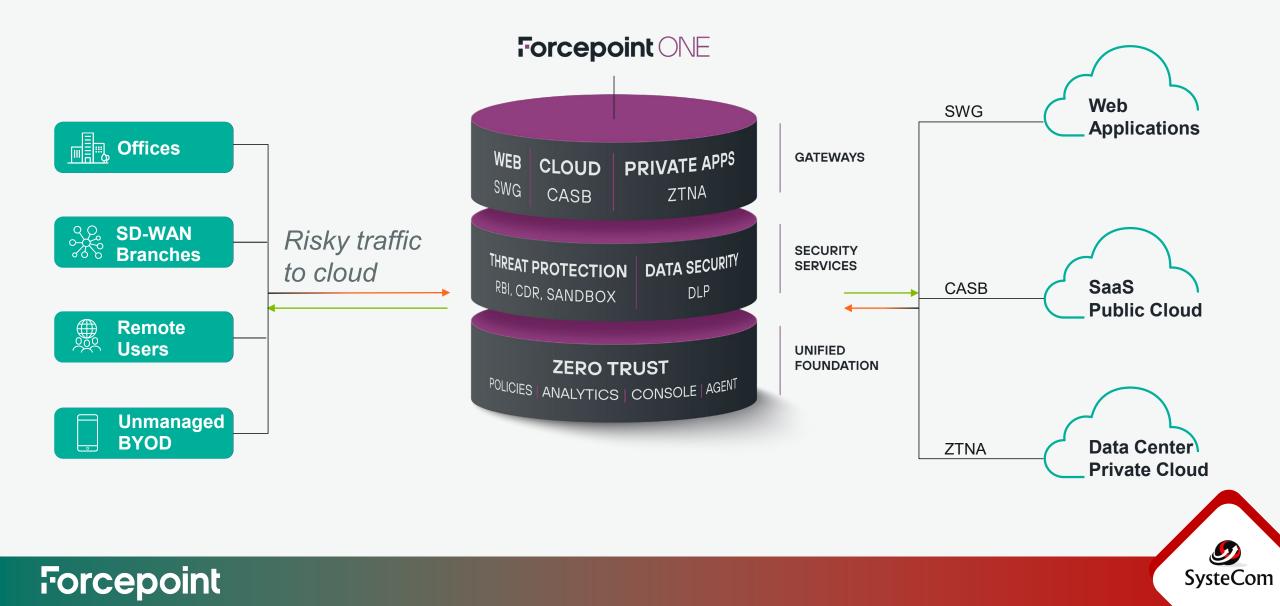

Hybrid Workforces

Cloud-native, modern architecture for a modern world

Forcepoint ONE Gateways

ONE service for securing data over SWG, CASB and ZTNA channels

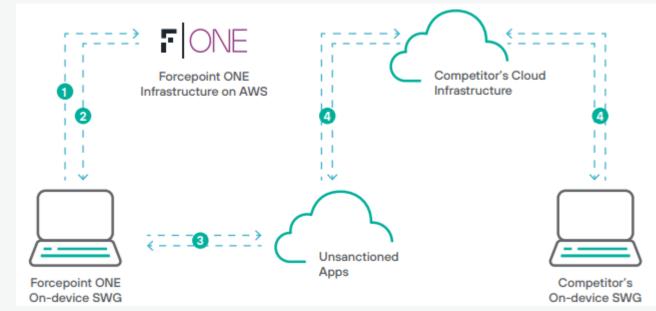

Secure Web Gateway (SWG)

Use Cases

- Give employees fast, safe access to the web
- Enforce acceptable use policy
- **Block uploading** of sensitive data to unsanctioned websites
- Stop malware from getting onto user devices without compromising usability
- Detect and control shadow IT
- **Prevent** corporate exposure to users' private data

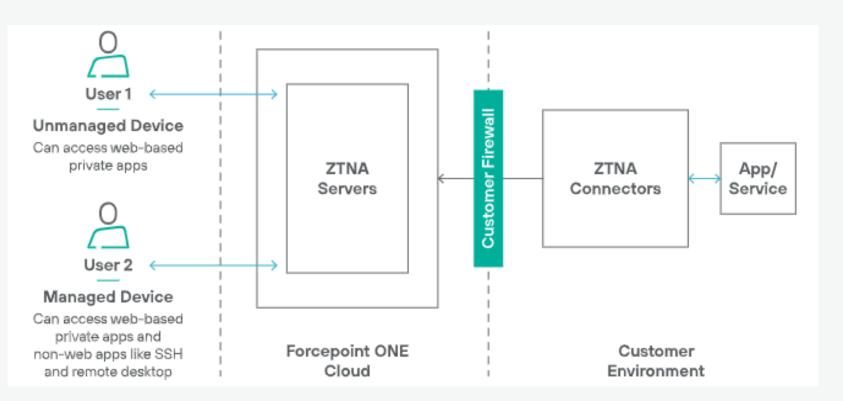

- 1. Query to check browsing policy of a newly seen URL. Files needing to be scanned for malware or sensitive data.
- 2. Responses to browsing policy queries. Responses to allow or deny file uploaded or downloaded.
- 3. All unsanctioned application trac sent directly between the user and the unsanctioned application
- 4. All unsanctioned application trac sent through competitor's cloud infrastructure

Zero Trust Network Architecture (ZTNA)

Use Cases

- **Replace VPNs** for accessing private apps in data centers and private clouds.
- **Provide safe, agentless access** to private web apps from BYOD and unmanaged devices.
- Control uploading and downloading sensitive data in any private web app.
- Stop malware hidden in business data files to and from private web apps.
- Safeguard access to private non-webservers from managed Windows and macOS devices.

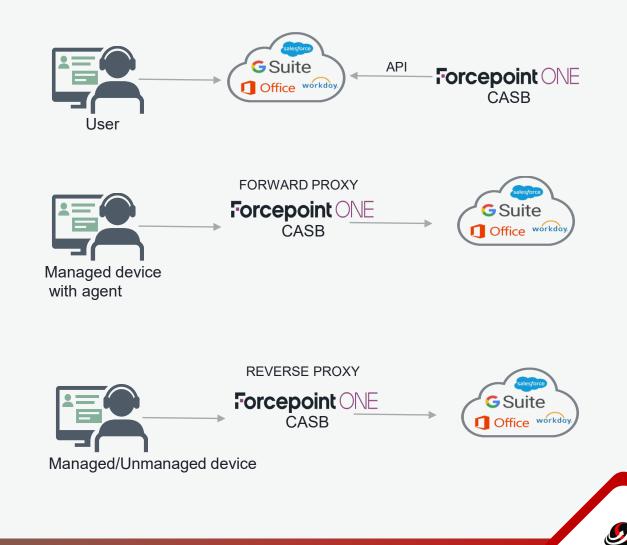

Cloud Access Security Broker (CASB)

Use Cases

- Safeguard and control access to managed apps from BYOD
- Control sensitive data uploading and downloading in any managed SaaS app
- **Stop malware** hidden in business data files
- Detect and control shadow IT

SysteCom

Security Services

THREAT PROTECTION

Remote Browser Isolation

Content Disarm & Reconstruction

Sandbox

DATA SECURITY

Data Loss Prevention

ONE service for Threat Protection & Data Security

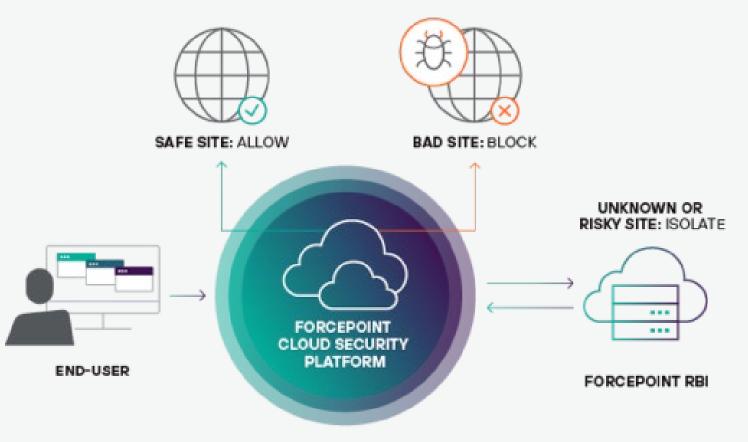

Remote Browser Isolation (RBI)

Use cases

• Expand Web Access

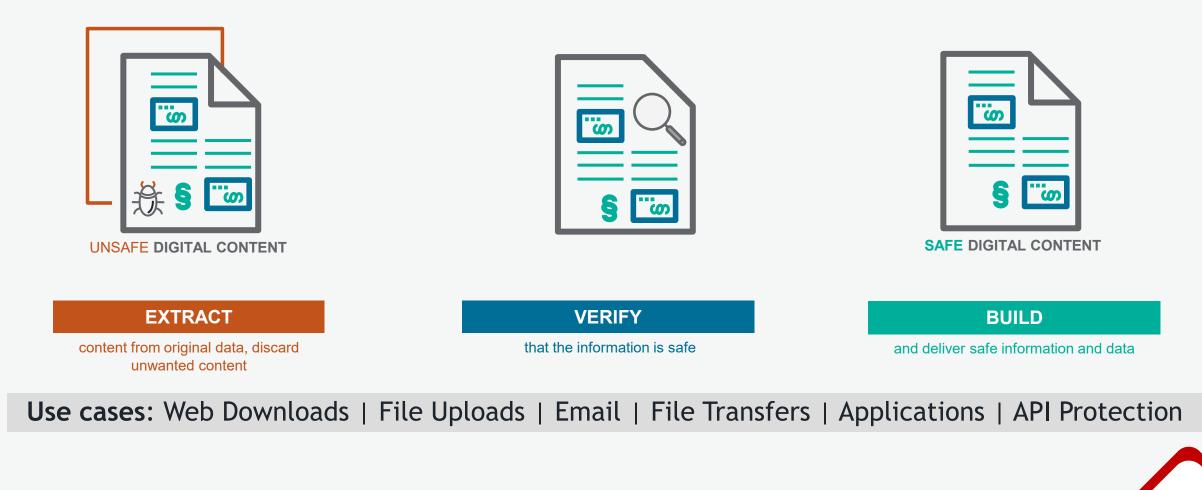

Without Additional Risk

- Protect C-Level and Other High-Risk Users
- Block Phishing Attacks
- Prevent Data Loss

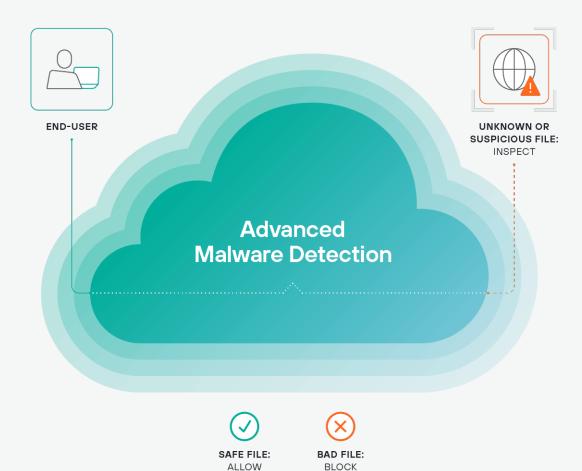

Content Disarm and Reconstruction (CDR)

SysteCom

Advance Malware Detection (Sandbox)

- Zero-day threat detection
- Collective shared intelligence
- Comprehensive file support

Data Loss Prevention (DLP)

Protect what matters most

Secure regulated data, protect IP, and prevent loss in the office, in the cloud, or at home.

Understand your people and your data

Use visibility and context to get a better understanding of how your people use data apply dynamic enforcement where it makes sense.

Stop the breach before it happens

Shift from event-centric to risk-centric approach with real-time enforcement.

Secure your Data

Without slowing down your business

The advantage of Forcepoint One

Helping you reach full potential

Deployments in Greece and Cyprus

Experienced & Certified Engineers

Customized onboarding, training and

support services

Maximizing Security with Forcepoint ONE

Thank you for your time!
